## **Abstract**

The online food ordering market includes foods prepared by restaurants, prepared by independent people, and groceries being ordered online and then picked up or delivered. The first online food ordering service, World Wide Waiter (now known as Waiter.com), was founded in 1995. Online food ordering is the process of ordering food from a website or other application. The product can be either ready-to-eat food or food that has not been specially prepared for direction consumption.

### ➤ **Scope:**

The aim of this project is to find out who is the best restaurants, highest rating, cost, cuisine cost, expensive restaurants with respective areas. There are four dashboards showing Shop name with rating, Cost of cuisines, Places in different professions. Dashboards show in which area the expensive restaurants are there, what is rating, what all items available, etc. so that each and every one can analyse which restaurant is the best according to cost and ratings.

### ➤ **Problem Statement:**

The online food ordering market includes foods prepared by restaurants, prepared by independent people, and groceries being ordered online and then picked up or delivered. The first online food ordering service, World Wide Waiter (now known as Waiter.com), was founded in 1995. Online food ordering is the process of ordering food from a website or other application. The product can be either ready-to-eat food or food that has not been specially prepared for direction consumption.

### ➤ **Tasks:**

- Do ETL: Extract-Transform-Load the dataset and find for me some information from this large data. This is form of data mining.
- What all information can be achieved by mining this data, would be explained in class by the trainer
- Find key metrics and factors and show the meaningful relationships between attributes.
- Do your own research and come up with your findings.

➤ **Tools Used:**

- The Business Intelligence tools like MS Excel and Power BI for making analysis and visualization.
- MS Excel is used for data.
- Power BI is used to prepare data and make graphs and charts accordingly. Make dashboards using the charts.

➤ **KPIs (Key Performance Indicators):**

- Dashboard will be implemented to display and indicate certain KPIs and relevant indicators.
- As and when, the system starts to capture the historical/periodic data for a user, the dashboards will be included to display charts over time with progress on various indicators factors.
- Key Indicators displaying top restaurants:
  - Affordable restaurant
  - Expensive restaurant
  - Expensive area
  - High available food items
  - High rating restaurant

➤ **Deployment:**

- Any company or organization wants analyse data visual data for better understanding. For that, companies are already using the best business intelligence technologies for better data visualization and Power BI is one of them.
- Power BI has its various services. One can use Power BI for making good visuals because Power BI Desktop is free of cost, anyone can use it will be deployed on its own Power BI Services, from there one can see your work, dashboards etc. You can also sharable link for those who want to see your work.
